

LEVEL II^{INC.}

Premier Public Safety Systems

We at *LEVEL II* wish to welcome you to the 2015 CCUG conference. We hope you enjoy your time and experience at CCUG. We know that budgets remain challenging in these tough economic times, but the work still needs to be done. *LEVEL II* has been designing, implementing, installing, and maintaining 24/7 public safety systems since 1979 and has been a long time CCUG sponsor. Over the years *LEVEL II* has developed systems for mission critical applications, always with the end user in mind. We emphasize flexibility, reliability, and customer satisfaction. Of particular interest to CCUG members are features of four of our core products whose unique properties establish them industry leaders:

MAGUS, *LEVEL II*'s fifth generation message switch:

- First entered service in November 1999 controlling a 37-agency CLETS regional system—the system has been growing in features and capabilities ever since.
- Designed to be user friendly, fast, reliable with 99.99% availability, Administrators can easily define new transactions. It is scalable and an economic answer for any size agency.
- Meets FBI security requirements and California DOJ's Policies, Practices, and Procedures. Two-Factor Authentication, FIPS 140-2 compliant encryption algorithms.
- Complete set of CLETS screens - ready to use out of the box. These screens and transactions are kept up to date with DOJ changes as an element of on-going maintenance.
- The WATCH facility allows an agency to set up "watches" for critical information being processed through **MAGUS** in real-time.
- Data sharing permits access to disparate databases as well as other systems.

THE JOURNAL, *LEVEL II*'s intelligent archive:

- Versatile search capability allows rapid search and retrieval of archived data.
- Flexible – operates with the **MAGUS** switch as well as other vendor systems.
- Meets and exceeds the DOJ requirements for storing and retrieving CLETS information.

WebWS, *LEVEL II*'s third generation Web based workstation:

- Browser-based client, no special application to install.
- Information encrypted between client and **MAGUS**.
- Runs on desktop and notebook computers, tablets, and smart phones.

MDCWS, *LEVEL II*'s second generation Mobile Digital Computer Workstation:

- Designed to be configured to fit your agency's needs and usability.
- MDCWS to **MAGUS** communication complies with FBI and DOJ encryption requirements.

In addition to these products, *LEVEL II* provides Computer Aided Dispatching, GIS, Automatic Vehicle Location, and other accessories for these systems.
