

LEVEL II *inc.*

Premier Public Safety Systems

LEVEL II's public safety systems emphasize flexibility, reliability, and customer satisfaction. Of particular interest to CCUG members are two core products whose unique properties elect them industry leaders. Some of these two products' key features follow:

MAGUS, *LEVEL II*'s fifth generation message switch:

- First entered service in November 1999 controlling a 37-agency CLETS regional system—currently installed (or being installed) in five CLETS sub-nets;
- Adaptable – Administrators can easily define new transactions, change existing ones, and control how the system displays messages or transactions;
- Scalable – An economic answer for sites transmitting or receiving a few messages per hour, but able to accommodate up to hundreds of messages per second;
- Reliable – Installed on fault-tolerant platforms allowing continuous operations.

THE JOURNAL, *LEVEL II*'s intelligent archive:

- Automatically archives transactions flowing through local or wide area networks;
- Versatile Search Capability – Allows rapid search and retrieval of archived data, even large archives. Search arguments can include any of a number of fields common in message headers. They can also be Boolean associations of character strings, which can contain “wildcards.” Those strings can be anywhere within the archived messages. Searches can be winnowed repeatedly to refine search results;
- Adaptable – No special programming needed to define record formats or contents, allowing new records to be incorporated without major cost or effort;
- Flexible – Operates with the **MAGUS** switch or other vendors' systems from.

In addition to these products, *LEVEL II* provides Computer Aided Dispatching, Mobile Digital (wireless) Computing systems, Automatic Vehicle Location, and accessories for these systems.

Our Background

In 1979, *LEVEL II, Inc.* installed its message switch as the heart of ACCESS, the Washington State Patrol statewide law enforcement communications network. The company has been providing sharply performing and supremely reliable public safety system products ever since.

You can see **MAGUS** or **THE JOURNAL** described here at the CCUG conference. If you are unable to visit our booth and would like more information, please contact *LEVEL II* at:
