

LEVEL II *inc.*
Premier Public Safety Systems

We at *LEVEL II* would like to welcome you to the 2011 CCUG conference. We know in these tough economic times budgets are tight, but the work still needs to be done. We hope you enjoy your time and experience at CCUG. *LEVEL II* has been designing, implementing, installing, and maintaining 24/7 public safety systems since 1979 and has been a long time CCUG sponsor. Over the years *LEVEL II* has developed systems for all kinds of applications, always with the end user in mind. We emphasize flexibility, reliability, and customer satisfaction. Of particular interest to CCUG members, below are features of three of our core products whose unique properties elect them industry leaders:

MAGUS, *LEVEL II*'s fifth generation message switch:

- First entered service in November 1999 controlling a 37-agency CLETS regional system—the system has been growing in features and capabilities ever since.
- Designed to be user friendly, fast, reliable with 99.99% availability, Administrators can easily define new transactions. It is scalable and an economic answer for any size agency.
- Meets FBI security requirements and California DOJ's Policies, Practices, and Procedures.
- Complete set of CLETS screens - ready to use out of the box. These screens and transactions are kept up to date with DOJ changes as an element of on-going maintenance.
- WATCH facility and Data Sharing – The WATCH facility allows an agency to set up WATCHes for critical information being processed through the system. Data Sharing permits access to disparate databases as well as other systems.

THE JOURNAL, *LEVEL II*'s intelligent archive:

- Automatically archives transactions flowing through local or wide-area networks.
- Versatile Search Capability – allows rapid search and retrieval of archived data.
- Flexible – operates with the **MAGUS** switch as well as other vendor systems.

LTIMDC, *LEVEL II*'s second generation Mobile Digital Computer controller and workstation:

- Designed to be configured to fit your agency's needs and usability.
- MDC Client workstation to MDC Server communication complies with FBI and CLETS encryption requirements.

In addition to these products, *LEVEL II* provides Computer Aided Dispatching, GIS, Automatic Vehicle Location, and other accessories for these systems.

You can see **MAGUS**, **LTIMDC**, and **THE JOURNAL** here at the CCUG conference. If you are unable to visit our booth and would like more information, please contact *LEVEL II* at:
